

# Build a window wildlife hide

**Step 1:** Dismantle an old cardboard box, removing any tape. You may need to cut one side to leave you with a large open sheet.

**Step 2:** Hold the cardboard sheet against the window for a rough guide of the width needed. Cut to size, making sure it fits neatly inside the window frame.

**Step 3:** Cut away any access cardboard, but leave the bottom of the box in tact to form a ledge to help keep your hide sitting upright.

**Step 4:** Mark rectangles where you would like your viewing windows to be and cut out three sides - leaving the top as a flap.

**Step 5:** Add handles by sticking two pieces of masking tape together.
