Red Squirrel Post-Mortem Examinations

If you find a dead red squirrel it may be possible for it to be sent for post mortem, in order to further our knowledge on the conservation, welfare and diseases of red squirrels.

Please ensure that you wear disposable gloves when handling dead squirrels.

All dead red squirrels found in **Scotland** should be sent to:

Easter Bush Pathology
Royal (Dick) School of Veterinary Studies
University of Edinburgh
Easter Bush Veterinary Centre
Roslin
Midlothian
EH25 9RG

Contact: Liam.Wilson@ed.ac.uk

Tel: 0131 6517310

Easter Bush Pathology Reception: 0131 651 7458 or ebp.enquiries@ed.ac.uk

Postage and Packaging

The Royal Mail is able to accept diagnostic samples via the normal post for postage within the UK. To protect public health, ***it is essential that red squirrels sent for post mortem are appropriately packaged.*** Royal Mail or courier services may refuse to handle a leaking package.

If it is not possible to post the red squirrel the same day that it is found, carcasses should be stored refrigerated but only if you have the appropriate facilities, (e.g., at a wildlife centre, veterinary surgery). DO NOT use domestic fridges – carcasses *may* carry dangerous infectious agents. Carcasses may be frozen only as a last resort, as freezing can destroy some of the post mortem evidence.

Any direct contact with the dead squirrel should be avoided, i.e., place your hand within a plastic bag, pick up the carcass with covered hand and invert the bag over the carcass and tie the bag securely. Use a separate bag for each carcass.

The secured bag must then be wrapped in plenty of absorbent material e.g., kitchen roll, which then must be placed in another two securely sealed plastic bags (which should not have the ventilation holes common to many carrier bags.)

The package should then be placed within a crush proof container, such as a rigid margarine tub (this does not have to be done separately for each squirrel, as long as each specimen is properly bagged and labelled), then with an accompanying note (name, address and telephone number of senders; date, time & location found; storage conditions; suspected cause of death), packaged within a jiffy post-bag, or a substantial brown paper parcel.

The senders name and address should be written clearly on the back of the package and the package **MUST** be labelled:

BIOLOGICAL SUBSTANCE - CATEGORY B - HANDLE WITH CARE

Also, a hazard diamond shape containing the number UN3373 (as below) must also be included on the package.

BIOLOGICAL SUBSTANCE CATEGORY B

Packages must be sent either by guaranteed next day delivery or first-class post. Please do not send packages on a Thursday or Friday, as the laboratory may be closed at the weekend.

Although you will have used an inverted plastic bag or disposable gloves, please remember to **wash your hands** after dealing with the dead red squirrel and disinfect any surfaces used.

Please either alert the lab that you are sending a red squirrel for post-mortem or inform your local Red Squirrel Conservation Officer so that they can notify the lab.

Red Squirrel Post-Mortem

*email: *Tel/mobile:

Please complete this form and include together with the appropriately packaged dead red squirrel.

A separate copy of this form should be completed for each squirrel sent.

*email or telephone contact is useful if any follow-up information is required. Postal address is for returning the report to the finder; sender address required by Royal Mail.
